FOREIGN AGRICULTURAL TRADE

OF THE UNITED STATES

Digest

Agricultural Exports Reach Record \$7.2 Billion in 1970 (see p. 7). U.S. agricultural exports hit a record \$7.2 billion in calendar year 1970, 21 percent above the 1969 level and 4 percent above the \$6.9 billion of 1966. Creating the gain were a 48-percent advance in soybeans, a 39-percent rise for wheat, and smaller increases for nearly all other commodities. Only tobacco, rice, meats, and hides and skins dropped slightly below the export value levels of a year earlier.

Our exports of grains and preparations rose over one-fifth in 1970. Eastern and Western Europe substantially increased their imports of wheat and other grains from the United States in 1970 to make up for poor grain harvests. Livestock industries in developed countries responded to economic expansion and rising incomes, sharply increasing demand for U.S. feed grains, soybeans, and soybean products.

* * * * *

<u>U.S. Agricultural Imports Gained 14 Percent in 1970 (see p. 16)</u>. U.S. demand for agricultural imports in 1970 continued to expand, in response to expanding consumer incomes and rising domestic prices. The value of imported farm products increased 14 percent to more than \$5.6 billion, accounted for mostly by higher prices -- the import quantity index gained 4 percent from a year earlier.

Imports of supplementary (competitive) products rose 14 percent to a new high of \$3.5 billion. Gains in animal products, fruits, vegetables, sugar, and beverages led the increase. Hides, wool, mutton, and copra were the only competitive imports below the levels of the previous year. Imports of complementary (noncompetitive) products rose 15 percent in value because of higher prices; the quantity index declined 1 percent. Coffee, black pepper, and vanilla beans led price increases.

* * * * *

<u>U.S. Feed Grain Exports Reverse 3-Year Downtrend in 1969/70 (see p. 20)</u>. U.S. exports of feed grains increased 20 percent in 1969/70 to 19 million metric tons, reversing a 3-year downtrend. Nearly all of the gain was in commercial exports, which made up 94 percent of the total. Government-financed exports, the remaining 6 percent, have generated a smaller share of feed grain exports during recent years. But these exports have helped to develop and expand domestic livestock and poultry industries abroad, stimulating larger commercial purchases of feed grains and other products from the United States.

U.S. exports to Asia gained most, climbing 44 percent to 7.8 million tons. Asia received two-fifths of total exports. Shipments to Japan soared 2.0 million tons to nearly 6.5 million tons. Exports to Europe, adjusted for transshipments through Canada and the Netherlands, rose 4 percent to 9.6 million tons. They accounted for half of U.S. feed grain exports.

In 1969/70, U.S. exports accounted for 46 percent of world trade, which was about 2 million tons higher than a year earlier.

* * * * *

International Price Highlights (see p. 46). Despite higher export prices of wheat in North America, c.i.f. U.K. prices of North American wheats declined, as did c.i.f. U.K. prices of Argentine corn, of sorghum grain, soybeans, and cotton, and the export price of Thai rice. However, the c.i.f. U.K. prices of U.S. corn and Australian wheat rose.

* * * * *

World Trade Highlights (see p. 50). Libya's farm imports reached a record \$93 million in 1969, 8 percent larger than in 1968 and more than 4 times the \$22 million of 1962. The U.S. share of these imports rose to nearly 6 percent, up from 4½ percent in 1968, mainly reflecting a sharp gain in tobacco shipments. Agricultural imports of the UAR (Egypt) in 1969 fell to \$191 million, down 22 percent from a year earlier and 44 percent below the 1967 peak. Wheat and flour imports dropped sharply. The U.S. share of the UAR's imports advanced to 5.4 percent, from 1968's 4.3 percent.

Meat shipments of \$544 million accounted for nearly one-half of Denmark's \$1.14 billion farm product exports in 1969. Exports to the United States accounted for 11 percent of this total. Brisk gains in fruits, sugar, fats and oils, and meats advanced Turkey's farm exports to \$456 million in 1969, up 5 percent from a year earlier. Sharply lower tobacco shipments to the United States reduced our share of Turkish exports from 15.2 percent in 1968, to 11.2 percent in 1969.

* * * * *

U.S. Agricultural Exports, July-December 1970 (see p. 65). U.S agricultural exports for July-December 1970 reached an alltime high of \$3.8 billion. This value topped by 16 percent the volume in July-December 1969 and by 6 percent the previous record in 1966. Wheat grain alone accounted for one-third of the first-half fiscal 1971 increase and soybeans for over one-fourth. Other advances occurred for soybean oil, tallow, dairy products feed grains, and protein meal. Tobacco, meat, rice, and hide and skin exports declined.

U.S. exports of farm products to the European Community were up one-fourth. Exports totaled \$881 million, compared with \$706 million for the like period a year earlier. Exports of commodities subject to the EC variable levies rose 51 percent, due to larger wheat and feed grain shipments and accounted for over one-half of the gain. Exports of commodities not subject to variable levies rose \$80 million in July-December. Soybeans and soybean products accounted for nearly all of this increase. Exports of tallow, nuts, and corn byproducts also gained. Exports of tobacco to West Germany declined substantially, however.

* * * * *

U.S. Agricultural Imports, July-December 1970 (see p. 72). U.S. imports of agricultural products increased 7 percent to \$2.8 billion in July-December 1970, compared with the same period a year earlier. The gain was concentrated in supplementary (partially

competitive) imports, which were 11 percent above last year's \$1.6 billion. Complementary (noncompetitive) imports were only 2 percent above July-December 1969. Expansion in supplementary imports occurred for live animals, dairy products, meats, fruits, vegetables, grains, edible nuts, sugar, wine, and animal feeds. Among complementary imports, gains for bananas, essential oils, and spices were about offset by a value drop for cocoa beans and smaller imports of crude rubber, silk, tea, and carpet wool.

Table 1.--U.S. exports: Value of total and agricultural exports, including specified Government-financed programs and commercial (dollar) sales by selected commodities and commodity groups, averages 1955-59, 1960-64, and 1965-69; annual 1969/70, July 1969 to date 1/2/

AGRICULTURAL EXPORTS REACH RECORD \$7.2 BILLION IN 1970

by Dewain H. Rahe <u>1</u>/

U.S. agricultural exports in calendar year 1970 rose to \$7.2 billion, 21 percent above 1969. Contributing most to the export gain were the 48-percent increase in soybeans and the 39 percent for wheat. Most other commodity exports gained also. Only tobacco, rice, meat, and hide and skin exports dropped below 1969 levels.

The rise in our agricultural exports in 1970 was associated with continued economic gains in the developed countries of Japan, Canada, and Western Europe. In addition, reduced grain crops and smaller stocks in Europe stimulated U.S. exports of grains, especially wheat. Faster economic growth in many developing countries stimulated dollar purchases of U.S. farm products. But shipments under Government programs continued to account for the bulk of U.S. exports to developing nations. Another factor that accentuated the gain in 1970 was the sharply reduced exports in January and February 1969, because of the longshoremen's strike at the Atlantic and Gulf ports.

Much of the higher value of agricultural exports in 1970 stemmed from higher prices for many principal export items. Overall, higher prices contributed about one-third of the value rise. Prices gained substantially for feed grains, soybeans, cotton, tobacco, protein meal, vegetable oils, and tallow. However, prices of rice and hides and skins were somewhat below year-earlier levels.

<u>Grains and preparations.--U.S.</u> exports of grains and preparations totaled \$2.6 billion in 1970, 21 percent above the \$2.1 billion level of 1969. Both wheat and feed grain exports increased. Wheat grain exports of 641 million bushels were more than two-fifths above 1969.

The gain in wheat exports stemmed from reduced production and stocks in Europe. European production and stocks of all grains was 8 to 9 million tons below the level of a year earlier. European exports declined and U.S. exports to European customers increased. Most of the increase in U.S. wheat exports in 1970 was in commercial sales for dollars. Commercial sales accounted for over two-thirds of the export total, compared with 59 percent a year earlier.

U.S. feed grain exports advanced 16 percent to 19.4 million metric tons. Shipments to Japan and Western Europe gained. Japan, by far the most important dollar customer for U.S. feed grains, purchased 6.7 million metric tons. European Community purchases of U.S. grains, after declining for the past 3 years, picked up because of lower EC grain production and stocks. Exports to the EC totaled 5.7 million tons in 1970, well above

^{1/} Assistant Chief, Trade Statistics and Analysis Branch, Foreign Development and Trade Division, Economic Research Service.

the 4.4 million tons in 1969. The average price per metric ton of feed grain exports was \$54.44 in 1970, compared with \$51.26 in 1969. The 1970 reduction in U.S. feed grain production due to unfavorable weather and the corn blight sharply increased the U.S. average price.

U.S. rice exports totaled 36.9 million bags in 1970, about 8 percent below 1969. The increase in foreign free world production of 9.4 million tons reduced the need for U.S. rice. Most of the decline occurred in commercial sales for dollars to the European Community and other developed nations. Exports under programs to the developing nations will probably be slightly below the 24 million bags in 1969.

Oilseeds and products.--U.S. exports of oilseeds and products, totaling \$1.9 billion, were two-fifths larger than in 1969. Soybeans alone accounted for two-thirds of the overall gain in this group. Exports of soybeans rose to 435 million bushels, 124 million bushels more than in 1969. This is the ninth consecutive year that soybean exports have advanced over the previous year. During the past decade, soybean exports gained an average of 11 percent annually. The substantial rise in soybeans is associated with improved incomes which have permitted increased consumption of meat and other livestock products in Western Europe and Japan. In addition, the relatively high grain prices in the European Community encouraged European farmers and processors to utilize rather large amounts of protein meal, especially soybeans, in their feed rations. All U.S. exports of soybeans are commercial sales for dollars. Japan has been the best single market for U.S. soybeans. In 1970, Japan purchased 109 million bushels, compared with the previous year's 76 million. The European Community purchased 148 million bushels, up from 105 million in 1969.

U.S. protein meal exports rose to a new record of 4.2 million tons, one-fifth above 1969. Approximately 90 percent of the protein meal went to Western Europe. Continued growth of the livestock industry in Western Europe, coupled with small grain production and high grain prices, increased the demand for protein meal in the past year. Although the production of fishmeal increased substantially, especially in the last half of 1970, world trade in this product advanced only slightly. The combined protein meal and equivalent of meal from soybeans accounted for approximately one-half of the protein imported into Western Europe.

Exports of cottonseed and soybean oils advanced to 1.9 billion pounds in 1970, up 63 percent from 1969. There has been a substantial gain in commercial sales of these oils in 1970. However, Government programs continue to account for a large proportion of the exports. Increased consumption and tight world supplies of fats and oils accounted for the expansion in exports in the past year. Foreign export availabilities of key edible oils, such as peanut, sunflower seed, and coconut have been below trend.

Animals and animal products.--U.S. exports of animals and animal products advanced 10 percent to \$817 million in 1970. A substantial increase in export volume combined with higher prices produced a 48-percent gain in the export value of animal fats. Other gains occurred for dairy products, baby chicks, and other livestock products, including live animals. Substantially more cattle were exported to Canada this year because of lower U.S. prices and increased demand. U.S. exports of meats in 1970, totaling \$132 million, were 16 percent below a year earlier. Pork exports dropped from 145 million pounds in 1969 to 61 million in 1970. Most of the pork reduction was in shipments to Japan. In 1969, Japan imported large quantities of pork because of high domestic prices and increased consumption. However, Japanese production increased and import needs decreased in 1970.

U.S. exports of dairy products totaled \$127 million in 1970, up slightly from a year earlier. Around three-fourths of the dairy products moved under Government programs to less developed countries. Nonfat dry milk, totaling 416 million pounds, accounted for 80 percent of total 1970 dairy shipments.

Exports of poultry products totaled \$56 million, little changed from a year earlier. Poultry product exports picked up somewhat in late 1970 because of lower U.S. prices and increased production. Exports of broilers and fryers totaled 95 million pounds in 1970, compared with 86 million pounds in 1969.

U.S. exports of hides and skins totaled 21.5 million pieces in 1970, up slightly from a year earlier. However, value was down about 5 percent as increased competition from other suppliers and greater use of synthetic products reduced prices. Japan, the single largest outlet for U.S. hides and skins, purchased 7.3 million pieces in 1970. Large quantities also moved to Mexico, Western Europe, the Soviet Union, Rumania, Poland, and Czechoslovakia.

Fruits and preparations. -- U.S. exports of fruits and preparations totaled \$334 million in 1970, up slightly from the previous year. Plentiful supplies of most U.S. fruit products helped to maintain the relatively high export level of 1970. Exports of canned peaches and fruit cocktail were large in the first half but off in the last half of 1970 because of lower production in the United States and increased production in Australia and South Africa. However, U.S. production of oranges, sharply above the level of a year earlier, coupled with lower prices, stimulated U.S. exports of citrus and citrus juice. Canada remained the best market for U.S. fruit, especially fresh, taking approximately two-fifths of total exports of fruits and preparations. Substantial quantities of U.S. fruits also went to Western Europe, the Caribbean, Hong Kong, and Japan.

<u>Vegetables and preparations</u>.--U.S. exports of vegetables and preparations totaled \$206 million in 1970, 7 percent above the level of a year earlier. The gain occurred in dried peas and beans, due mainly to larger U.S. production and somewhat smaller foreign free world production.

<u>Nuts and preparations</u>.--Exports of nuts and preparations surged to an alltime high of \$69 million in 1970, up 62 percent from the year-earlier level. Most of the gain occurred in shipments of almonds, which totaled 63 million pounds in 1970. U.S. production of almonds has increased sharply with increased use of mechanical harvesting.

Tobacco.--U.S. exports of tobacco in 1970 were 12 percent below the 577 million pounds exported in 1969. The United Kingdom and West Germany took substantially less than a year earlier as these countries maintained lower stocks and purchased more tobacco from nontraditional suppliers: India, Korea, and Mainland China. Higher prices (averaging close to \$1 a pound in 1970), preferential trade arrangements, and trade restrictions against U.S. tobacco may be shifting customers to other suppliers. The high price in 1970 is attributed to the larger proportion of stemmed tobacco and to the high quality of last year's flue-cured crop. Tobacco exports declined in the past year even though recent crops have been of especially high quality.

Cotton. -- U.S. exports of cotton in 1970 totaled 3 million bales, up from 2.4 million bales in 1969. Value rose even more, up one-third to \$372 million. Export prices rose in the last half of 1970 as foreign free world production and stocks declined and consumption increased. However, continued tight supplies of U.S. cotton, particularly short-staple cotton demanded by foreign producers for blending, limited volume of U.S. exports in 1970. Asian countries purchased about three-fourths of U.S. shipments in 1970. And Japan, the top outlet, took 713,000 bales.

U.S. AGRICULTURAL IMPORTS GAINED 14 PERCENT IN 1970

The value of U.S. farm product purchases abroad in 1970 expanded 14 percent to nearly \$5.7 billion, up from \$5.0 billion a year earlier. While some commodities showed gains in both tonnage and value, the overall import quantity index rose 4 percent to 123 (1957-59 = 100). The value of many items rose primarily because of price increases.

Imports of supplementary (competitive) agricultural products moved 14 percent higher in 1970 to \$3.5 billion (table 5). Included in the expansion were live animals, dairy products, eggs, beef, pork, fruits and vegetables, edible nuts, vegetable oils, sugar, beverages, and animal feeds. A few reductions occurred notably for hides, wool, mutton, and copra. Cattle entries accelerated to 1.2 million head (\$122 million) from 1.0 million (\$102 million) in 1969. Purchases of race horses from Ireland resulted in a substantial import value rise. Sharply higher swine entries also were recorded. Fresh chilled beef imports grew 10 percent to 1.1 billion pounds, while higher prices resulted in an 19 percent value jump to \$554 million. Pork imports were 14 percent higher at \$272 million. Fresh veal and mutton entries declined.

Dairy product imports rose 25 percent on the strength of volume and price increases. Cheese entries were up 9 percent in overall quantity while value gained 22 percent. Casein purchases expanded 16 percent in volume and 22 percent in value. Ice cream imports jumped to 8 million gallons (\$6.6 million) from 2.6 million gallons (\$1.9 million) in 1969. Purchases of eggs rose sharply from \$3 million in 1969 to \$10 million in 1970.

The total value of fruit imports edged up slightly to \$146 million in 1970. Among the principal products, advances occurred for fresh and frozen strawberries, blueberries, oranges, most canned fruit juices, and canned pineapple. Fresh apple entries fell 27 percent to \$7 million. Edible nut imports were moderately higher at \$100 million as cashew kernels and Brazil nut purchases grew.

Accelerated grain imports were led by unmilled barley and corn, broken rice, and bakery products. Animal feed items such as grain byproducts and pet food expanded that group to \$29 million.

Sugar imports in 1970 advanced to more than 5.2 million short tons (\$729 million) from 4.3 million tons (\$638 million) the previous year. Prices averaged \$139 per ton, compared with \$134 in 1969. Coconut oil purchases gained sharply to 595 million pounds (\$77 million) against 428 million pounds (\$50 million) a year earlier. The average value of coconut oil rose 1 cent per pound to 13 cents.

Total agricultural imports	4,957,232	5,667,049:	+14

^{1/} Preliminary.

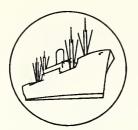

Vegetable imports grew to \$299 million from \$241 million a year earlier. Most fresh vegetable entries accelerated, with sharp increases for beans, eggplant, garlic, onions, peas, peppers, squash, and tomatoes. Tomato imports continued their long-term growth trend by expanding to 647 million pounds (\$96 million) from 450 million pounds (\$68 million) in 1969. Processed vegetables showed moderate import advances, especially for canned tomatoes, mushrooms, and olives.

As a group, complementary agricultural imports were 15 percent higher in value than during 1969. Performance in commodity groups was mixed, with volume generally lower. The quantity index fell 1 percent to 102 (1957-59 = 100), largely because of declines in coffee, rubber, tea, spices, wool, silk, and sisal. Value gains were recorded for bananas, cocoa, coffee, and essential oils. Sharply higher prices were paid for coffee and black pepper (table 6).

U.S. FEED GRAIN EXPORTS REVERSE 3-YEAR DOWNTREND IN 1969/70

by Eleanor N. DeBlois 1/

U.S. exports of feed grains in 1969/70 increased 20 percent to 19 million metric tons, reversing a 3-year downtrend. Higher prices brought the value to \$995 million, nearly 30 percent above the year-earlier total. Nearly 90 percent of the gain was in commercial exports. Exports in 1969/70 still lagged behind the 25.4 million-ton high of 1965/66, and the levels of 1966/67 and 1967/68. The inclusion of feed grain products brings the 1969/70 total to 19.5 million tons, compared with 16.4 million a year earlier.

World exports rose about 2 million tons in 1969/70 to an estimated 41.6 million tons. Record exports were more than 43 million tons in both 1965/66 and 1966/67. Most of the rise in world trade last year came from increased imports by Japan, South Africa, Mexico, some European countries, and Israel, partly offset by the continued decline in imports by the European Community. Purchases by Japan were up over 1.5 million tons, nearly double the previous year's expansion. South Africa and Mexico, normally net exporters, imported corn because of drought losses in prior growing seasons. Imports by the EC, continuing the downtrend which began in 1965/66, reached 6.2 million tons in 1969/70, the lowest level in 14 years.

World exports of corn, grain sorghums, and barley were higher, but shipments of oats declined. Corn made up 68 percent of world feed grain exports, compared with 70 percent a year earlier. Grain sorghums accounted for nearly 12 percent during both years. Barley was the biggest gainer, rising to 19 percent of the world total from 16 percent in 1968/69.

U.S. feed grain exports in 1969/70 accounted for 46 percent of world trade, up sharply from a low of 40 percent a year earlier. During the 1960's U.S. exports were not less than 46 percent of world trade and in the record year 1965/66, they reached 55 percent. In 1969/70, the United States supplied more than one-half of world corn exports and nearly two-thirds of the sorghum total. The U.S. share of barley trade last year was only 4 percent and its share of oats, only 3 percent.

Exports by the 8 major competitors of the United States -- Argentina, Australia, Brazil, Canada, France, Mexico, South Africa, and Thailand -- dropped around 1.6 million tons, mostly due to substantially reduced harvests in South Africa, Mexico, and Brazil during previous growing seasons. $\underline{2}$ /

1/ Authorized by Title I, P.L. 480.

2/ Shipments under dollar credit sales agreements signed through Dec. 31, 1966, authorized by Title IV, P.L. 480. Shipments under dollar credit and convertible foreign currency credit sales agreements signed from Jan. 1, 1967, authorized by Title IV. 89-808.

3/ Authorized by Title II, P.L. 480, as amended by P.L. 89-808

4/ Authorized by Sec. 303, Title III, P.L. 480, and other legislation.

5/ Authorized by Sec. 303, Title III, P.L. 480, and other legislation.

5/ Includes expenditures under commodity (nonproject) programs, project programs, and economic development loans, authorized by P.L. 87-195. For fiscal 1969, includes July-December 1968 only because of a delay in the preparation of the report for January-June 1969.

5/ "Total feed grain exports outside specified Government programs" (sales for dollars) include, in addition to unassisted commercial transactions, shipments of some feed grains with governmental assistance in the form of (1) barter shipments for overseas procurement for U.S. agencies and (2) extension of credit and credit guarantees for relatively short periods.

1/ Leas than 500 metric tons.
8/ The apparent excess of Government-financed exports over total exports may be due to lags in reporting or the recording of the export as destined for the country through which transahipment was made. 9/ The quantity shown for total exports includes, in addition to the quantities reported by the Bureau of the Census, the quantity of grain sorghums donated through voluntary relief agencies, not separately reported by Census.

Shipments under dollar credit and con-1/ Authorized by Title I, P.L. 480. 2/ Shipments under dollar credit sales agreements signed through Dec. 31, 1966, authorized by Title IV, P.L. 480. Shipments under dovertible foreign currency credit sales agreements signed from Jan. 1, 1967, authorized by Title I, P.L. 480, as amended by P.L. 89-808.

6/ "Total corn exports outside specified Government programs" (sales for dollars) include, in addition to unassisted commercial transactions, shipments of some corn with governmental assistance in the form of (1) barter shipments for overseas procurement for U.S. agencies and (2) extension of credit and credit 3/ Authorized by Title II, P.L. 480, as amended by P.L. 89-808.
4/ Authorized by Sec. 303, Title III, P.L. 480, and other legislation.
5/ Includes expenditures under commodity (nonproject) programs, project programs, and economic development loans, authorized by P.L. 87-195. For fiscal year 1969, includes July-December 1968 only because of a delay in the preparation of the report for January-June 1969.

guarantees for relatively short periods.

7/ Less than 500 metric tons.

8/ The apparent excess of Government-financed exports over total exports may be due to lags in reporting or the recording of the export as destined for the country through which transshipment was made.

U.S. exports of corn rose 2.8 million tons to 15.6 million in 1969/70 generating nearly 90 percent of the over 3.1 million-ton gain in U.S. feed grain exports. Exports of grain sorghums rose 0.3 million tons to 3.0 million, accounting for 10 percent of the total gain. Shipments of barley were a little higher, but exports of oats were less than half of the volume of the previous year (tables 7 through 14).

Commercial sales were 94 percent of feed grain exports in 1969/70. Since 1962/63, dollar exports have ranged from just under 90 percent to over 95 percent of the total, except during 1966/67 when they dropped to 84 percent. During that year large P.L. 480 shipments of grain sorghums to India to supplement wheat as a food grain reduced the proportion of commercial exports.

Shipments under barter contracts for overseas procurement for U.S. agencies and exports under CCC credit sales programs are included in tables 7 through 14 in commercial exports or "exports outside specified Government programs", but are shown separately in tables 15 through 19. Shipments under barter contracts were up about a fourth in 1969/70 from the year-earlier level and shipments under the CCC credit sales program more than doubled. No feed grains moved under Export-Import Bank loans or guarantees in 1969/70. Exports of feed grains under the barter and credit sales programs, mostly to Europe, amounted to 10 percent of U.S. commercial exports in 1969/70, compared with 8 percent a year earlier.

Unlike wheat exports, of which a large proportion has moved under P.L. 480 and Mutual Security programs, shipments of feed grains under programs have made up a much smaller share of the total. They declined from a little over one-fourth in 1959/60 and 1960/61 to about 6 percent in 1965/66. The share rose to 16 percent in 1966/67. In 1968/69, exports under P.L. 480 were only 5 percent of the total and in 1969/70, they amounted to 6 percent. Most of the program shipments were in exchange for local currency, but during the latter half of the 1960's long-term credit sales gradually supplanted local currency sales. In 1969/70, only South Vietnam received feed grains for local currency.

P.L. 480 exports to certain countries were programmed to meet import needs after production shortfalls occurred. In other countries, the importation of feed grains under this authority contributed to the development and expansion of domestic livestock and poultry industries. In turn, this growth resulted in larger commercial purchases of feed grains and other products from the United States.

^{1/} Includes disbursements by U.S. commercial banks under Export-Import Bank mediumterm guarantees against political and/or financial risk.

Israel has been an important destination for U.S. feed grains under P.L. 480, but has also purchased sizable quantities for dollars. Soon after exports to Greece and Spain for local currencies ended, these countries shifted to important commercial purchases of feed grains and other products from the United States. In 1968, South Vietnam and the U.S. AID Mission implemented a program to encourage a rapid increase in swine and poultry production. This program included the production of a formulated feed based on Title I corn. India continues as an important destination for feed grains under Title I, but shipments in 1969/70 consisted of 182,000 tons of grain sorghums, compared with 2.1 million tons of grain sorghums and 102,000 tons of corn in the peak year 1966/67. The Republic of Korea is also a leading market for P.L. 480 exports, but also makes substantial dollar purchases.

Europe. -- U.S. shipments of feed grains to Europe in 1969/70 as reported by the U.S. Census (table 8) declined 1 percent to 8.2 million tons. However, nearly three-fourths of the shipments reported as going to Canada and over a fourth of the total to the Netherlands were transshipments through these countries to several European countries. Transshipments to other world areas were negligible. Table 20 shows export totals to Europe by country reflecting these substantial transshipments. The adjusted totals show a rise to 9.6 million tons from 9.2 million a year earlier. Over half of U.S. feed grain exports were shipped to Europe. The United Kingdom, No. 1 European customer, took 10 percent less than a year earlier, but shipments to Spain were nearly 5 times the year-earlier total. Exports to Portugal, Greece, and East Germany made sizable gains. Exports to the EC continued their downward trend. Although the Netherlands and Belgium-Luxembourg took considerably more, declines in sales to Italy, West Germany, and France lowered the EC total to 5.2 million tons, from 5.4 million in 1968/69. However, the EC took over half the shipments to Europe and included four of the five leading European single-country markets.

Most of the exports under supply-type barter contracts and the CCC credit sales program went to Europe. These shipments amounted to 1.3 million tons, nearly 14 percent of U.S. commercial sales to this area. Spain, Portugal, and Poland were the principal destinations under the barter program. Greece, Poland, and Rumania -- which suffered severe flood damage last spring -- took sizable quantities under CCC short-term financing.

Asia.--U.S. exports of feed grains to Asia totaled 7.8 million tons, compared with 5.4 million in 1968/69, and accounted for two-fifths of total U.S. feed grain exports. U.S. exports to Japan climbed 2.0 million tons to nearly 6.5 million tons. The United States supplied about two-thirds of Japan's phenomenal feed grain imports of 10 million tons. Japan also took more feed grains from Argentina than in 1968/69, but South Africa and Mexico supplied less due to reduced export availabilities. With higher incomes, Japanese consumers are purchasing more livestock products, particularly meat. Nearly 90 percent of our feed grain exports to Asia were dollar sales during 1968/69 and 1969/70. Included in U.S. commercial exports were exports under supply-type barter, principally to Israel, Lebanon, and the Republics of Korea and China. Some exports to Korea also moved under the CCC credit sales program.

India and South Vietnam received U.S. feed grains under P.L. 480 in 1969/70. Israel and South Korea were important destinations for P.L. 480 exports, but these nations also made substantial dollar purchases.

Latin America. -- Exports of U.S. feed grains to Latin America rose from about 0.4 million metric tons in 1968/69 to nearly 0.9 million in 1969/70. Most of the gain was due to the purchase of over 0.4 million tons of U.S. corn by Mexico to offset drought damage to domestic corn. Chile was the second largest market financing most of its shipments under the long-term credit program. Shipments to Venezuela rose to 90,000 tons from only 1,000 a year earlier, and exports to Jamaica and Trinidad-Tobago also were higher. More than four-fifths of shipments to Latin America in 1969/70 were commercial sales, compared with three-fourths in 1968/69.

donations, and donations through voluntary relief agencies under the authority of P.L. 480.

2/ Exports of feed grains outside specified Government-financed programs include, in addition to unassisted commercial transactions, shipments of some feed grains with governmental assistance in the form of (1) barter transactions involving overseas procurement for U.S. agencies, which benefit the balance payments and rely primarily on authority other than P.L. 480 and (2) extension of credit and credit guarantees for relatively short periods.

3/ Less than 500 metric tons.

Africa. -- Exports of U.S. feed grains to Africa doubled, rising from 110,000 tons in 1968/69 to 234,000 tons in 1969/70. Shipments of corn made up most of the total. Both Government-financed and commercial exports were higher. Donations under Title II more than doubled, but exports under Title I were much reduced. Western Africa, n.e.c., Zambia, Tunisia, and Ghana were the largest recipients of P.L. 480 shipments. The Canary Islands, the UAR, Senegal, and Tanzania were the largest commercial markets.

<u>Canada.--</u>As may be noted from table 23 1.4 million of the nearly 2.0 million tons of feed grains recorded by the U.S. Census as exported to Canada in 1969/70 consisted of transshipments through St. Lawrence ports, mostly to European countries. These U.S. grains are shipped to Canada for finishing the loading at Canadian ports of vessels moving through the St. Lawrence Seaway.

Transshipments through Canada and the Netherlands.--Transshipments through Canadian ports on the St. Lawrence and through the Netherlands for 1968/69 and 1969/70 are shown in tables 21 and 22. These shipments are reported in volume only. Values are computed from exports unit values (f.o.b. U.S. ports) during the applicable period. They supply additional data on feed grain exports to given countries and help explain apparent discrepancies between program data and total exports as reported by the Bureau of the Census. Most of the transshipments reported were to European countries.

Discrepancies between shipping data derived from program reports and Census reports.—The use of data prepared in various operating agencies for P.L. 480, barter, and credit sales, as compared with total exports tabulated by the Bureau of the Census, produces discrepancies which become more apparent when reporting on a more specific basis, such as commodity-by-country, than when reporting on a more general basis, such as totals by commodity or by country. The tabulation of exports under P.L. 480 programs has been considerably improved in recent years and is being integrated into a data processing system maintained in the Foreign Agricultural Service. However, shipments at the end of a reporting period, because of late receipt of documents, may be cut off in one report and included in another. Reports by quantity are more accurate than reports in terms of value, since values shown for Government-financed programs involve some degree of estimation.

In 1968/69 and 1969/70, a few instances occurred in which exports under Government-financed programs appeared to exceed total exports as reported by the Census Bureau. Although there was generally a very close agreement between commercial exports and exports under the barter and credit sales programs, there were a few countries in which exports under these programs appeared to exceed commercial exports of which they are a part. All U.S. feed grains exported to Yugoslavia and Rumania under the CCC credit sales program were included in transshipments through Canada. Other discrepancies may be attributed to lags in reporting, differences in valuation procedures, and the recording of the exports as destined for the country through which transshipment is made.

International Price Highlights

PRICE SERIES OF INTERNATIONAL SIGNIFICANCE

Wheat and feed grain prices were irregular during December. Canadian No. 1 Northern wheat, in store Fort William-Port Arthur, sold for \$65.85 per metric ton, slightly higher than in November and 6 percent over a year earlier. Northern Manitoba No. 2 wheat, c.i.f. U.K., however, declined slightly to \$84.00 per ton; but was 12 percent higher than a year earlier.

Wheat of U.S. origin showed a similar price pattern. The buyer's price of U.S. No. 1 Hard Winter wheat, ordinary protein, f.o.b. Gulf ports, was quoted at \$63.20, a level 4 percent higher than a month earlier and 21 percent higher than a year earlier. The seller's price increased slightly to \$64.03 per ton, 10 percent over a year ago. The increase of the buyer's price relative to the seller's price reflects a generally rising world wheat price, due in part to decreased world wheat production. In fact, at the end of December, buyer's and seller's prices of this wheat were equal, and no export payment was made. U.S. No. 2 Hard Winter wheat, c.i.f. U.K., was quoted at \$79.77, slightly lower than a month earlier, but 13 percent higher than a year earlier. By contrast, Australian wheat, c.i.f. U.K., rose slightly to \$71.66 and at that level was 9 percent higher than a year earlier. Argentine wheat was unquoted again for the fourth consecutive month due to a very short crop in Argentina from a greatly reduced acreage. It is unlikely that Argenina will export any nondurum wheat to the Eastern Hemisphere during the 1970/71 marketing year.

Feed grain prices, with the exception of U.S. corn, were lower in December. Argentine corn, c.i.f. U.K., was selling at \$77.83 a ton, 25 percent higher than a year earlier. U.S. No. 3 yellow corn, c.i.f. U.K., was selling at \$75.23, 4 percent above November, and 23 percent higher than a year earlier. These price movements lowered the premium at which Argentine corn was selling over U.S. corn, c.i.f. U.K., to \$2.60 a ton, as compared with \$5.35 in November. The price of sorghum grain, c.i.f. U.K., decreased 5 percent to \$66.53, however, still 9 percent higher than in December 1969.

The price of U.S. No. 2 soybeans, c.i.f. U.K., was quoted at \$128.63 a ton, 3 percent lower than a month earlier but 23 percent higher than a year earlier.

The export price of Thai rice was quoted at \$138 a metric ton, 3 percent lower than November and 23 percent lower than a year earlier.

The price of cotton, Memphis Territory, strict middling 1-1/16", c.i.f. Liverpool, was down slightly to 30.62 cents a pound; but at that level it was 6 percent higher than a year earlier.

1/ Buyer's price equals seller's price plus cost of export certificate or minus export payment, except for rounding errors. 2/ U.S./Argentine sorghums transshipped from Continental European ports.

Source: Monthly Bulletin of Agricultural Economics and Statistics, FAO; The Public Ledger, London; Grain Market News, USDA, CEMS; Bangkok Board of Trade; and Cotton and General Economic Review, Liverpool.

In review, 1970 saw generally rising price levels in wheat, feed grains, and soybeans. Decreasing world production and rising trans-Atlantic freight rates contributed to higher prices for wheat. Feed grain prices rose in response to reports of southern leaf blight damage to the U.S. corn crop. According to the December Crop Report, U.S. corn production in 1970 was 10 percent less than in 1969. Feed grain prices are high compared with a year ago but below their September peaks.

The price of U.S. soybeans, c.i.f. U.K., was high during 1970 despite slightly increased production. World demand for soybeans and soybean meal was unusually strong.

World Trade Highlights

AGRICULTURAL IMPORTS OF LIBYA AND UAR

<u>Libya.--</u>Food and related farm products entering Libya in 1969 reached a record \$93.5 million, up 8 percent from 1968, and more than 4 times 1962's \$22 million (tables 24 and 26). Significant gains in imports of dairy products, coffee and tea, meats, sugar, rice, and tobacco more than offset declines in live animals, fats and oils, and fruits and vegetables imported.

Imports of farm products from the United States, the fifth-ranking source in 1969, were valued at \$5.4 million -- up 38 percent from 1968. The U.S. share rose to 5.8 percent in 1969 from 4.5 percent in 1968, reflecting mainly a sharp gain in shipments of U.S. tobacco. Smaller shipments of U.S. feed grains were about offset by gains in wheat and rice. The United States provided more than three-fourths of Libya's tobacco imports in 1969.

Italy, providing 12 percent of total imports, was Libya's leading source of farm products in 1969. West Germany, Ceylon, and the Netherlands followed. The United States, Ceylon, Italy, West Germany, and the Soviet Union gained substantially larger shares of Libya's farm imports in 1969, but Tunisia, Lebanon, and Rumania supplied notably reduced shares.

Principal imports from Italy were fruits, wheat and flour, animal feeds, sugar, dairy products, rice, and vegetables. West Germany supplied mainly wheat and flour and dairy products. Other principal sources of Libyan imports in 1969 by commodities were: Live animals, Bulgaria and Rumania; coffee and tea, Ceylon and Mainland China; dairy products, the Netherlands; fruits, Ecuador and Lebanon; meats, Tunisia and Denmark; sugar, U.S.S.R. and Turkey; and rice, Mainland China.

<u>UAR (Egypt)</u>.--Reflecting a sharp drop in wheat and flour purchases, Egypt's 1969 agricultural imports fell to \$191 million, down 22 percent from a year earlier and 44 percent from the 1967 peak. Egypt also spent much less for feed grains, coffee and tea, and sugar, but somewhat more for wool, meats, dairy products, and hides (tables 25 and 27).

Although Egyptian imports from the United States declined slightly to \$10.3 million, our share of the total advanced from 1968's 4.3 percent to 5.4 percent. In 1966, when U.S. wheat and flour shipments to Egypt reached \$108 million, the U.S. share of Egypt's farm imports was slightly over 45 percent. In 1969, the United States was Egypt's fourth-ranking supplier of farm products, providing more than one-half of the feed grains and animal feeds, three-fifths of the animal fats, and 12 percent of the tobacco and dairy products.

*Hides and skins exclude waste and used leather (211.8). Wool excludes carded and combed wool or other animal hair (262.7), wool tops (262.8), and waste of wool and of other animal hair (262.9).

France, the U.S.S.R., and Spain sold large shipments of wheat and flour to Egypt in 1968 and 1969, making them leading sources for farm products. Wheat and flour shipments accounted for 95 percent of Egypt's 1969 farm imports from France, 98 percent of the total from Spain, and 63 percent of the total from the U.S.S.R.

Leading sources abroad in 1969 for Egypt's other major farm imports by commodities were: Tobacco, Greece and India; fats and oils, the U.S.S.R. and Switzerland; wool, Australia and Iraq; coffee and tea, India and Lebanon; vegetables, Syria; dairy products, the Netherlands; meats, Mainland China; and oilseeds and hides, Sudan.

AGRICULTURAL EXPORTS OF DENMARK AND TURKEY

<u>Denmark.</u>—Danish agricultural exports were valued at \$1.14 billion in 1969, 5 percent above the previous year but 3 percent below the 1966 peak. Export gains, ranging from 2 percent for hides to 83 percent for feed grains, were recorded for all major farm commodities except dairy products and sugar (tables 28 and 30).

Meats generally account for about one-half the value of Denmark's exports of farm products. In 1969, despite a 3-percent gain in meat shipments, the share declined 1 point to 48 percent. Dairy products accounted for 16 percent, and hides and skins and live animals about 6 percent each of total exports.

Farm exports to the United States, valued at \$126 million in 1969, were 4 percent above the year-earlier level. Meats (\$90 million) accounted for 71 percent. Hides and skins and dairy products each accounted for about 9 percent. The United States purchased 16 percent of meats and hides, 12 percent of beverages, 10 percent of other grain preparations, 7 percent of sugar, and 6 percent of dairy products exported by Denmark in 1969.

The United Kingdom, Denmark's best agricultural market, purchased \$400 million of exports in 1969. Shipments to the United Kingdom, up 2 percent from 1968, represented more than a third of Denmark's total farm exports. As a customer for Danish farm commodities, the United Kingdom ranked first for meats (\$269 million), dairy products and eggs (\$89 million), and animal feeds (\$14 million); second for beverages (\$6 million); and third for hides and skins (\$8 million), fats and oils (\$3 million), and feed grains (\$1 million).

Exports in 1969 to West Germany, valued at \$161 million, were up 20 percent from the year before, reflecting sharp gains in live animals and feed grains. Live animals accounted for one-third of Denmark's farm product sales to West Germany in 1969, hides and skins 15 percent, dairy products 11 percent, and meats 10 percent.

Other important Danish markets for specified farm products included Sweden, meats and animal feeds; Italy and France, meats and hides; Norway, sugar and grain preparations; and Switzerland, hides, dairy products, and animal feeds.

<u>Turkey</u>.--Turkish farm exports totaled \$456 million in 1969, up 5 percent from the year-earlier level. Brisk gains in fruits, sugar, fats and oils, and meats were largely offset by smaller exports of cotton, tobacco, animal feeds, and wool (tables 29 and 31).

A \$35 million (28 percent) advance in fruit sales pushed this category's share to more than one-third of Turkish farm exports. Sugar exports have fluctuated widely in recent years -- at \$14 million in 1969 they were 5 times the previous year's level but still substantially below the \$20 million peak in 1964. Turkish sales of animal and vegetable fats and oils soared from \$1 million in 1968 to \$13 million in 1969. Meanwhile, meat shipments moved briskly to nearly \$4 million, up from 1968's \$1 million.

Reflecting sharply reduced tobacco shipments, Turkey's exports of farm products to the United States in 1969 dropped one-fifth below the year-earlier level to \$52 million.

The U.S. share of all Turkish exports declined to 11.5 percent in 1969 from 15.2 percent in 1968. Tobacco (\$41 million), fruits and nuts (\$8 million), and hides and skins (\$1.5 million) accounted for nearly all of Turkey's farm exports to the United States. The United States took 50 percent of Turkish tobacco exports and 22 percent of Turkish hide and skin exports in 1969.

Exports to West Germany, Turkey's best agricultural customer, advanced 31 percent to \$105 million -- equaling nearly one-fourth of Turkey's total farm exports in 1969. West Germany's major purchases were fruits and nuts (\$71 million), cotton (\$17 million), and tobacco (\$11 million). The United States was Turkey's second largest farm product customer. Italy became Turkey's third-ranking agricultural market by taking \$35 million worth of farm products (mainly cotton, fruits, and fats and oils) in 1969. This was nearly double the 1968 total.

Export Highlights

U.S. AGRICULTURAL EXPORTS, JULY-DECEMBER 1970

U.S. agricultural exports in October-December 1970, the second quarter of fiscal year 1971, rose to an alltime high of \$2.18 billion, 15 percent above the same period in 1969 and 32 percent above July-September 1970. U.S. agricultural exports in the first 6 months of fiscal year 1971 totaled a record \$3.83 billion, 16 percent above the same period a year earlier, and above the previous high for July-December in 1966. Compared with July-December 1969, wheat grain accounted for about one-third of the increase and soybeans for over one-fourth. Other advances occurred for soybean oil, tallow, dairy products, feed grains, and protein meal. Tobacco, rice, meats, and hides and skins declined.

Exports of grains and preparations advanced \$1.44 billion in July-December 1970. up from \$1.19 billion for the same period a year earlier. Wheat and products accounted for two-thirds of the gain. Most of the increase in wheat stems from the reduced 1970 crop and lower stocks in Europe. European supplies of all grains are currently about 8 million to 9 million tons below a year ago. In July-December, Europe purchased approximately 79 million bushels of U.S. wheat, accounting for around two-fifths of the total export gain. In addition to increased shipments to Europe, the United States exported more wheat to markets supplied by European producers in 1969/70. Exports also were larger to India, Japan, Israel, and Morocco. Because of the substantial rise in feed grain prices, especially corn, low quality wheat is currently very competitive with feed grains in many foreign countries.

U.S. feed grain exports advanced to 11.4 million tons in July-December 1970, from 10.8 million tons for the same period a year earlier. Larger exports of barley, grain sorghums, and oats accounted for this increase. Corn exports were down 45 million bushels from a year earlier.

Japan, our top market, purchased about 6 percent more feed grains in July-December 1970 than a year earlier. U.S. feed grain exports also advanced to the European Community, Mexico, Venezuela, Korea, and Portugal.

U.S. rice exports of 18.2 million bags were slightly smaller than the 19.7 million a year earlier. A substantial rise in foreign free world rice production limited U.S. exports. U.S. exports under Government-financed programs in the first half of 1970/71 to the developing countries were very large. Movement declined to the European Community and most other developed countries.

U.S. exports of oilseeds and products continued advancing during the second quarter of 1970/71. Oilseed and product exports advanced to \$1.0 billion in the first half of 1970/71. 31 percent larger than the like period a year earlier. U.S. soybean exports rose to 220 million bushels from 189 million. The increase was concentrated in Japan and Western Europe. Japan purchased 59 million bushels in July-December 1970, up from 45 million in 1969. The European Community, the major purchaser in Europe, took 75

 $\frac{1}{}$ Preliminary.

million bushels in July-December 1970, compared with 64 million in 1969. Soybean prices were about 11 percent above a year earlier.

Combined exports of cottonseed and soybean oils rose to 935 million pounds in July-December 1970, up from 667 million in the previous year, in response to increased consumption and continued tight world supplies.

Protein meal exports rose to 2.2 million short tons in July-December 1970, up from 1.9 million the year before. Approximately 90 percent went to Europe. Continued growth in livestock production in Western Europe increased the demand for protein and other feed ingredients. Although world production of fish meal has gained substantially, world trade in this commodity advanced only slightly during July-December 1970.

Cotton exports in July-December 1970 were slightly larger than the same period a year earlier. The increase was concentrated in December, when exports totaled 362,000 bales. Foreign demand for U.S. cotton is up this season because of smaller foreign free world production and some gain in mill consumption. However, the continued tight supply of U.S. cotton, particularly short staple cotton, in demand by foreign producers for blending, will limit the volume of U.S. exports in 1970/71. Asia continues to be the best outlet for U.S. cotton. In July-December, approximately three-fourths of U.S. exports went to Asian countries.

July-December exports of animals and animal products topped the 1969 level by 15 percent. Most of this increase represented larger lard and inedible tallow exports and higher prices. Dairy product exports also advanced, primarily under Government-financed programs.

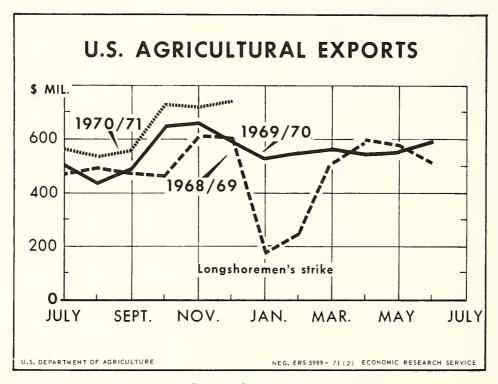

Figure 1

Hide and skin exports in July-December 1970 of 10.7 million pieces trailed the year-ago number. Smaller shipments to Western Europe caused most of the decline. Exports of poultry products, primarily broilers and fryers, gained for July-December. The value totaled \$31 million, compared with \$30 million for this period of 1969. Exports of poultry meat totaled 82 million pounds, advancing from 74 million pounds in 1969. Increased production in the United States and lower U.S. prices have encouraged exports. Exports of meats and products, totaling \$72 million were only slightly below the year-earlier level. Variety meat exports of 124 million pounds were 6 percent below a year earlier, and pork exports dropped one-third.

Combined exports of fruits and vegetables were about 3 percent lower than a year earlier. Fruit exports were valued at \$180 million, slightly below the level a year earlier because of reduced exports of fruit cocktail, canned peaches, and other canned fruits. The lower U.S. production and larger Australian and South African output discouraged U.S. exports during the current year. However, exports of fruit juices, primarily citrus, rose, because of increased Florida production and lower U.S. prices. Exports of vegetables and preparations were about the same as a year earlier. The value of dried bean and pea shipments was close to the record level of last year in July-December. Gains for a number of vegetable preparations offset lower shipments of frozen, fresh, and canned vegetables.

U.S. tobacco exports totaled \$297 million in July-December 1970, 15 percent less than in 1969. Reduced shipments to the leading markets, the United Kingdom and West Germany, accented the decline. These countries purchased more tobacco from nontraditional suppliers such as India, Korea, and Mainland China. U.S. prices rose to about \$1 per pound in July-December 1970, because the 1970 exports contained a larger proportion of stemmed tobacco than in 1969 and they came from a high-quality flue-cured crop.

U.S. Exports to the EC, July-December 1970

The European Community's purchases of U.S. agricultural products in the first half of fiscal year 1971 rose to \$881 million, one-fourth above a year earlier (table 34). U.S. exports of commodities subject to the EC variable levies rose 51 percent and accounted for over one-half of the total gain. The increase in variable-levy items occurred for feed grains and wheat. Shipments of rice, on the other hand, were sharply below the \$21 million exported in July-December 1969. Turkey exports showed a moderate gain. Other variable-levy items continued at the relatively slow pace of the past few years.

Exports of commodities not subject to variable levies totaled \$599 million, \$80 million above the July-December period a year earlier. Oilseeds and products accounted for nearly all the gain in this group. Exports of soybeans were valued over one-fourth above the \$168 million exported in July-December 1969. Protein meal exports also showed substantial increases. Exports of tallow rose to nearly \$20 million in July-December 1970, sharply above the \$7 million in 1969. Exports of corn byproducts totaled \$19 million in 1970, slightly above the level in 1969. Most of these products --such as corn gluten feed and meal -- do not fall under the variable-levy system. Exports of fruits and preparations, hides, flaxseed, and tobacco were below year-earlier levels. Most of the tobacco-export decline was in West German shipments.

^{1/} Grains, poultry, and pork were subject to variable levies beginning on July 30, 1962; rice, on Sept. 1, 1964; and beef and dairy products, on Nov. 1, 1964. 2/ Lard for food is a variable-levy commodity, while lard for industrial use is bound in the General Agreement on Tariffs and Trade (GATT) at 3 percent ad valorem. U.S. lard is for food use. 3/ Although canned poultry, tallow, and variety meats are subject to variable levies, these cannot exceed the amount of import duties bound in GATT.
4/ Variable levy on sugar-added content. 5/ Mainly corn gluten feed and meal, which are nonvariable-levy commodities; but may contain small quantities of other corn products, subject to variable levies (see "Export Highlights, March 1970").

Import Highlights

U.S. AGRICULTURAL IMPORTS, JULY-DECEMBER 1970

U.S. agricultural purchases from abroad showed a moderate increase in July-December compared with a year ago. Value rose 7 percent to nearly \$2.8 billion, on the strength of higher demand and prices. Competitive (supplementary) imports gained 11 percent to \$1.8 billion, while noncompetitive (complementary) products stayed about the same at \$1.0 billion (table 35).

The advance in supplementary imports was centered mainly in live animals, dairy products, meat, eggs, fruits, vegetables, grains, edible nuts, coconut oil, sugar, wines, and animal feed. Reduced imports of hides, apparel wool, and cotton partially offset the gains. Unmilled corn imports moved up sharply to 2.7 million bushels (\$6.3 million), from 511,000 bushels (\$1.2 million) in July-December 1969. Most additional purchases came from South Africa and Brazil. Rice imports rose rapidly to 37 million pounds (\$2.0 million), from 1.2 million pounds (\$647,000) during the same months a year earlier. The increase was mainly in broken rice from West Germany and Canada.

For complementary products, purchases of some items increased. Bananas, essential oils, and spices showed volume and value growth. The volume of coffee fell 17 percent to 1.22 billion pounds, but value jumped 13 percent to \$561 million (table 36). Freeze damage in Brazil during August 1969 reduced exports and caused substantial price increases.

The volume of U.S. cocoa imports for July-December was 303 million pounds, 17 percent higher than a year earlier. However, the sharply reduced prices which followed abundant West African crops last season resulted in an import value decline of 7 percent to \$88 million. Smaller entries of crude rubber, silk, tea, and carpet wools nearly offset gains in other complementary products.

^{1/} Based on 359 classifications in 1970. 2/ The seasonal adjustment series has been revised to incorporate the Bureau of the Census Method X-11. This new method of adjusting for seasonal variations is a continuing system which takes into account changing seasonal patterns. For detailed explanation of the new adjustment procedures, see U.S. Department of Commerce, Bureau of the Census, The X-11 variant of the seasonal Method II seasonal adjustment program, Technical Paper No. 15. U.S. Government Printing Office, Washington, D.C., 1965.

Explanatory Note

U.S. foreign agricultural trade statistics in this report include official U.S. data based on compilations of the Bureau of the Census. Agricultural commodities consist of (1) nonmarine food products and (2) other products of agriculture which have not passed through complex processes of manufacture such as raw hides and skins, fats and oils, and wine. Such manufactured products as textiles, leather, boots and shoes, cigarettes, naval stores, forestry products, and distilled alcoholic beverages are not considered agricultural.

The trade statistics exclude shipments between the 50 States and Puerto Rico, between the 50 States and the island possessions, between Puerto Rico and the island possessions, among the island possessions, and intransit through the United States from one foreign country to another when documented as such through U.S. Customs.

EXPORTS The export statistics also exclude shipments to the U.S. armed forces and diplomatic missions abroad for their own use and supplies for vessels and planes engaged in foreign trade. Data on shipments valued at less than \$251 are not compiled by commodity and are excluded from agricultural statistics but are reflected in nonagricultural and overall export totals in this report. The agricultural export statistics include shipments under P.L. 83-480 (Agricultural Trade Development and Assistance Act), and related laws; under P.L. 87-195 (Act for International Development); and involving Government payments to exporters. (USDA payments are excluded from the export value.) Separate statistics on Government program exports are compiled by USDA from data obtained from operating agencies.

The <u>export value</u>, the value at the port of exportation, is based on the selling price (or cost if not sold) and includes inland freight, insurance, and other charges to the port. The <u>country of destination</u> is the country of ultimate destination or where the commodities are to be consumed, further processed, or manufactured. When the shipper does not know the ultimate destination, the shipments are credited to the last country, as known to him at the time of shipment from the United States, to which the commodities are to be shipped in their present form. Except for Canada, export shipments valued at \$251-\$499 are included on the basis of sampling estimates; shipments to Canada valued at \$251-\$1,999 are sampled.

IMPORTS Imports for consumption are a combination of entries for immediate consumption and withdrawals from warehouses for consumption. Data on shipments valued at less than \$251 are estimated on the basis of a 1-percent sample and are not compiled by commodity. They are excluded from agricultural statistics but are reflected in nonagricultural and overall import totals in this report.

The <u>import value</u>, defined generally as the market value in the foreign country, excludes import duties, ocean freight, and marine insurance. The <u>country of origin</u> is defined as the country where the commodities were grown or processed. When the country of origin is not known, the imports are credited to the country of shipment.

Imports similar to agricultural commodities produced commercially in the United States and others that are interchangeable in use to any significant extent with such U.S. commodities are supplementary or partly competitive. All other commodities are complementary or noncompetitive.

Further explanatory material on foreign trade statistics and compilation procedures of the Bureau of the Census is contained in the publications of that agency.
